

Learner Name

Ofure Mariane Iregbeyen

1. Did you use any AI tool(s) to assist with this assignment?

☐ No. Why not?

☒ Yes. List the AI tool(s) you used and briefly describe the purpose for which you used the tool(s). (e.g., brainstorming, research, drafting content)

I used Claude for structuring and drafting the project work based on the assignment brief, researching FirstBank Nigeria Limited's public organizational profile (scale, customer base, strategic direction) to ground the business case and identifying a real, appropriately sized public dataset (Kaggle: Bank Customer Segmentation, 1M+ transactions) suitable as a proxy for FirstBank's customer data.

2. To demonstrate effective AI use, please provide your initial prompt(s) and a brief description of the steps you took to refine and iterate on the AI's output for this

Initial prompt: I shared a brief of my assignment expectations and asked Claude to come up with a structure for it using FirstBank Nigeria Limited, covering the required sections (vision, ethics, stakeholders, technical stack, repository structure, risks, and governance).

I refined the output by reviewing the AI's proposed vision statement, goals, and ethical principles and confirmed they matched the assignment's rubric and my own knowledge and understanding of FirstBank's strategic priorities. I checked the proposed dataset (Kaggle bank customer segmentation) for size, realism, and relevance, since it is being used as a proxy for FirstBank's actual data rather than presenting it as FirstBank's own data. I made sure that my final submission contained the structure and content of what I intended for the project.

3. List at least one source you consulted to verify the AI-generated content in your work.

- FirstBank of Nigeria Limited official website
- Kaggle dataset page: kaggle.com/datasets/shivamb/bank-customer-segmentation, to confirm dataset size, fields, and public availability.
